

Remote Mounting Base

FM200, FM400 and FM600

Technical Data

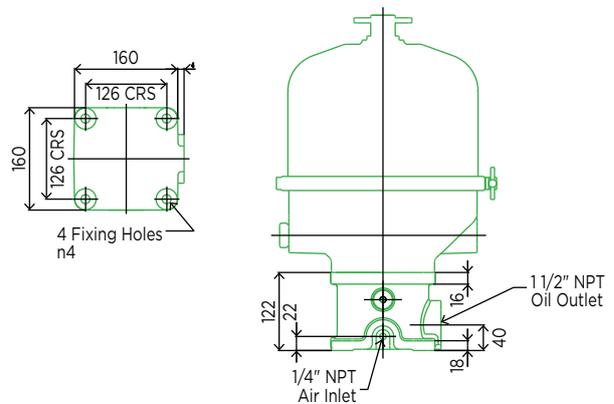

en 0817 © MANN+HUMMEL

A common remote mounting base is available for use with FM200, FM400 and FM600 centrifuges.

Many engine installations are compact with little space in which to mount a centrifuge directly on to an engine. To overcome this problem and the normal centrifuge requirements for a gravity oil return to the engine, FM200, FM400 and FM600 centrifuges can be supplied with a remote mounting base, which uses compressed air to maintain a positive pressure inside the centrifuge, eliminating the need for gravitational oil return. This device contains a float operated valve, which admits compressed air to forcibly return oil to the engine even through smaller than normal pipes. The float action controls the oil level within the remote mounting base and does not allow air to enter the oil return to the engine. The remote mounting base requires an external compressed air supply at a pressure between 0.5 and 3 bar. Since significant quantities do not flow out of the centrifuge into the engine, air consumption is near zero. If the system pressure exceeds 3 bar, a pressure regulator should be fitted.

DIMENSIONS (mm)

Model	Remote Mounting Base
Part number	68 991 11 101
Recommended oil return hose diameters	FM200: Ø 25 mm internal, FM400 and FM600: Ø 37 mm internal
Attached directly to	FM200, FM400 and FM600

Note: Remote mounting base will not operate if air pressure drops below 0.5 bar.
