Metallic Wear Debris Sensor

Real time indication of condition

ENGINEERING YOUR SUCCESS.

The Parker Kittiwake Metallic Wear Debris Sensor goes beyond the scope of normal wear debris sensors to offer even smaller size resolution. With an unbeatable detection range, the sensor provides a debris count for both ferrous and non-ferrous metals.

It's no secret that particles result from wear. It is imperative to know, not just the number of particles which pass through your system, but also the size and metallic composition. The Parker Kittiwake Metallic Wear Debris Sensor goes beyond normal protection systems, allowing you to monitor in real time and take immediate action on the first indication of change, thereby preventing all types of failure.

The Parker Kittiwake Metallic Wear Debris Sensor can be mounted within almost any lubrication system, on any type of machine. By using proven inductive coil technology, combined with smart algorithms to provide a particle size distribution count, the sensor measures ferrous and nonferrous metals resulting from the wear debris within the lubricant. This puts the user in control. The severity of the problem increases with an escalation in the production of larger wear debris particles.

With both digital and analogue outputs, the sensor can be easily integrated into existing condition monitoring and operating control systems, putting the user in contol. Whether it's checking the health of the machine or alerting to changing wear patterns, the sensor provides instant information, complementing existing laboratory oil analysis programmes and helping the user make informed maintenance planning decisions.

The Parker Kittiwake Metallic Wear Debris Senor is fully compliant with ASTM D7917-14 - Standard practice for Inductive wear debris sensors in Gearbox and drive train applications

Ambient Temperature:-20 to 70°C (-4 to 158°F)Analogue Outputs:2 x opto isolated 4 - 20 mA, 1 x alarm contacts (0.1 A max)Communications:Modbus over RS485 and TCP / IP*Connections:1/2"BSPP femaleDetection:> 40 micron (0.04 mm) [0.00157 inch] ferrous metal > 135 micron (0.135 mm) [0.0531 inch] non-ferrous metal size category of particles in the fluidOutput:Simultaneous quantification of metallurgical composition and size category of particles in the fluidFluid Compatibility:Petroleum, synthetic oils and water / oil emulsionsFluid Temperature:-20 to 85°C (-4 to 185°F)Flow Rate:0.3 - 1.9 ms-1Sensor Bore:Diameter 10 mm, length 120 mmMax Fluid Viscosity:500 cStPower Supply:18 - 30 V DCProtection:IP67	•

Power Supply: 18 - 30 V DC	Max Fluid Pressure:	20 bar (290 psi)
	Max Fluid Viscosity:	500 cSt
Protection: IP67	Power Supply:	18 - 30 V DC
	Protection:	IP67
Weight: 3 kg	Weight:	3 kg

1/2" BSP connections for quick and easy installation

Sealed to IP67 suitable for industrial use

Robust steel enclosure

LED display providing a visual indication of sensor status

Wide range of interface options due to variety of industry standard outputs

Ordering Information

Product Code	Description
FGK19567PA	Metallic Wear Debris Sensor

All sensors come complete with software for data downloading and trending. Contact Kittiwake for information about the wide range of installation accessories and alternative options that are available to suit your specific application.

Typical Applications

- Wind Turbines
- Mud Pumps
- Large Gearboxes Bearings
